

Pedro Morago López-Vázquez

Senior QA Engineer for Poker & Quantitative Systems

pedro@pedromorago.com pedromorago.com linkedin.com/in/pedro-morago-lopezvazquez
github.com/pedromorago Santander, Spain (CET). Fully remote since 2021.

Senior QA Engineer with 5 years of experience in test automation across international SaaS and telecom platforms. BSc in Mathematics, 10 years of poker experience, and hands-on testing across API, backend and E2E layers with Playwright and TypeScript, Cypress, REST Assured and Java, Karate and Python. Built a poker range-training product with production-style QA and a quantitative Python optimization model for CI. Targeting QA/SDET roles at the intersection of poker, AI and solver evaluation, game integrity and complex backend systems.

POKER AND QUANTITATIVE FIT

- 10 years playing poker, including Spin & Go; strong working knowledge of EV, equity, pot odds, ranges, combinatorics, blockers and decision-making.
- Mathematics background applied to optimization, combinatorial reasoning, edge cases and quantitative validation.
- Built Spin Trainer, a preflop range-training product with server-side grading, player statistics and 80 reference ranges.

EXPERIENCE

Senior QA Engineer, Alvatross by SATEC Jul 2026 – Present
Remote. Telecom OSS platform for EWE (Germany)

- Design and execute testing for TM Forum-based service-order flows across add, modify, delete, suspend and reactivate operations in Jira and Xray.
- Build API automation with Karate against TM Forum APIs, and created a one-click Postman smoke suite for post-deployment service checks.

QA Engineer, IriusRisk May 2024 – Jun 2026
Remote. International cybersecurity SaaS, threat modeling

- Built a Python MILP optimization model for CI sharding: 42% faster in a one-worker benchmark; modelling production workers showed 4 containers instead of 7 could be about 8% faster and 41% cheaper.
- Led the testing strategy for a core Security Content module across backend, API and frontend layers.
- Designed Playwright and TypeScript E2E automation for a combinatorial rules engine using Page Objects, API-backed setup and data factories.
- Automated backend APIs with REST Assured and JUnit 5, including schema validation, negative cases and traceability; contributed to a TestCafe to Playwright migration that cut runtime by about 80%.

QA Engineer, Fieldeas Jun 2021 – May 2024
Remote. Field service management SaaS

- Moved client projects from primarily manual testing to scalable Cypress and JavaScript E2E automation.
- Reported 500+ defects prioritized by product risk and business impact; validated data with SQL and coordinated releases with development.
- Onboarded and mentored teammates on QA tooling and automation practices.

SKILLS

Automation: Playwright, Cypress, Selenium, TestCafe
API and backend: REST Assured, JUnit 5, Karate, Postman, SQL
Programming: TypeScript, JavaScript, Java, Python
CI and tooling: GitHub Actions, Bitbucket Pipelines, Jenkins, Docker, Git, Jira, Xray, Qase, Confluence
Quality engineering: Test strategy, risk-based testing, E2E, API and integration testing, Shift Left, debugging, data-driven and combinatorial test design

EDUCATION AND CERTIFICATION

BSc in Mathematics
University of Cantabria, 2015 – 2020

**ISTQB Certified Tester
Foundation Level (CTFL) v4.0**
ISTQB, Dec 2024

PROJECTS

Spin Trainer
pedromorago.com/work/spin-trainer
Poker range trainer, React and Spring Boot. 145 API tests, 37 Playwright specs, mutation testing and real and mocked backend runs; the tests found 8 real defects.

CI Shard Advisor
shard.pedromorago.com
Public CI optimization tool. Recommends how to distribute Cypress specs across CI containers from run data; evolved from the IriusRisk optimization work.
