

Pedro Morago López-Vázquez

Senior QA Engineer

pedro@pedromorago.com pedromorago.com linkedin.com/in/pedro-morago-lopezvazquez
github.com/pedromorago Santander, Spain (CET). Fully remote since 2021.

Senior QA Engineer with 5 years of experience in quality assurance and test automation for international SaaS products and a telecom platform. API automation in Java (REST Assured, JUnit 5) and Karate, E2E testing with Playwright and Cypress, tests integrated into CI/CD pipelines, and test strategy in fully remote, distributed Agile teams (Scrum/Kanban). ISTQB CTFL v4.0 certified.

EXPERIENCE

Senior QA Engineer, Alvatross by SATEC

Jul 2026 – Present

Remote. Telecom OSS platform for EWE (Germany)

- QA on the OSS transformation of EWE, a German telecom and energy provider, built on TM Forum ODA standards.
- Design and run the tests for service-order flows in Jira and Xray: add, modify, delete, suspend and reactivate.
- Building API test automation with Karate against TM Forum APIs, and built a one-click Postman smoke suite that checks every service after a production deployment.

QA Engineer, IriusRisk

May 2024 – Jun 2026

Remote. International SaaS, cybersecurity and threat modeling

- Led the testing strategy for the Security Content module, one of the product's core components, defining the test mix across the testing pyramid (backend, API and frontend).
- Designed and maintained Playwright and TypeScript E2E automation for the rules engine, covering combinations of conditions and actions, with Page Objects, API-backed setup and data factories.
- Designed and deployed a Python optimization model (MILP) to split E2E tests across CI containers: 42% faster in a one-worker run. Modelling the 5 production workers showed 4 containers instead of 7 would be about 8% faster and 41% cheaper.
- Backend API automation in Java with REST Assured and JUnit 5 (Given-When-Then, JSON schema validation, negative cases, Qase traceability), plus API testing with Postman across development, staging and production.
- Took part in the migration from TestCafe to Playwright with TypeScript: about 80% less execution time and a more stable suite.
- Contributed to CI/CD pipelines in Bitbucket and applied Shift Left, reviewing requirements and technical designs early and turning them into test cases.

QA Engineer, Fieldeas

Jun 2021 – May 2024

Remote. Field service management SaaS

- Designed and executed functional, regression and integration tests across multiple client projects, reporting 500+ bugs prioritised by product risk and business criticality, with data validation through SQL queries.
- Built and maintained automated E2E suites with Cypress and JavaScript, moving the team's testing from manual to a scalable automation model.
- Produced the team's technical QA documentation (test plans, test cases, reports) and managed defects in Jira, coordinating releases with development.
- Onboarded and mentored new team members on tools and automation best practices, reducing ramp-up time.

SKILLS

Automation and testing: Playwright, Cypress, Selenium, TestCafe. Functional, regression, integration, API and E2E testing

API and backend: Java, REST Assured, JUnit 5, Karate, Postman, SQL

Programming: Java, JavaScript, TypeScript, Python

CI/CD and tools: Bitbucket Pipelines, GitHub Actions, Jenkins, Git, Docker, Jira, Xray, Confluence, Qase, Chrome DevTools

Strategy and process: Test strategy, Shift Left, test case design, code reviews, Agile (Scrum, Kanban)

EDUCATION AND CERTIFICATION

BSc in Mathematics

University of Cantabria, 2015 – 2020

Advanced Web Application Development with Java

CIC (bootcamp), 2021

ISTQB Certified Tester Foundation Level (CTFL) v4.0

Credential ID Brightest2024029052, Dec 2024

PROJECTS

Spin Trainer

pedromorago.com/work/spin-trainer
Poker range trainer built for a friend and tested like production: black-box API suite (REST Assured), the same Playwright specs against a mock and the real API, and mutation testing. The tests found 8 real defects.

CI Shard Advisor

shard.pedromorago.com
Recommends how to split Cypress specs across CI containers from run reports, with a demo that runs in the browser.

Screen Recorder (QA mode)

github.com/pedromorago/screen-recorder-qa
Chrome extension for bug reports: console, network (HAR) and user steps synced to the video, filed as issues in Jira and Linear.

QA Wiki

wiki.pedromorago.com
My QA knowledge base: 50+ articles on test strategy, API testing, Playwright, CI/CD and performance.
